Types of cache-control header?

resources to be loaded from cache?

Actual url must be used in rest response?

shape-outside, shape-inside css props?

which tags dont have placeholder in xml?

html property for displaying control in video player?

get `nameArray.next.value()` working?

ans : 1) we need to pass `nameArray = originalArray.values()` inorder access `nameArray` elements using `next.value()`. it prints only the value.

2) `nameArray = originalArray.entries()` inorder access `nameArray` elements using `next.value()`. it prints only the index, value.
